Mainsaver Announces 2013 User Conference Keynote Speaker

San Diego, Calif., January 2, 2013 – Mainsaver® Software, a Computerized Maintenance Management System (CMMS) system announced today that Peter Spinney, Director of Market and Technology Assessment at NeuCo, Inc., a leading provider of optimization technology solutions will deliver the keynote presentation at the 2013 Mainsaver User Conference.

Mr. Spinney’s presentation will focus on key drivers and emerging trends in capital asset management. It will begin with a definition of asset management, and then discuss emerging pressures affecting process and manufacturing industries alike, including competitive markets, offshore competition, aging assets, consolidation and disparate equipment and control systems, and competition for capital for simultaneously managing production facilities while responding to new regulatory requirements. Development in new technologies to address these challenges will be discussed, including data availability, available processing power, blurring of the distinction between discrete and continuous control systems, and new analytical techniques. Application of these new tools and techniques will be presented in the context of recent trends seen across industries, including standardization of practices, moving from preventive to predictive maintenance, Reliability-Centric Maintenance, etc. A unifying theme throughout the presentation will be the need to organizationally and technically integrate maintenance and operations as they pertain to the health of both equipment and production processes.

About Neuco:

NeuCo, Inc. was formed in 1997 by entrepreneur and technologist Curt Lefebvre and Boston-based Charles River Associates with the goal of bringing advanced artificial intelligence software solutions to bear on the power industry’s mounting emissions and competitive market pressures. Today, NeuCo is recognized as the leading provider of real-time asset optimization solutions that improve electric power plants’ emissions, efficiency and availability profiles.

In 2006, NeuCo acquired Pegasus Technologies, an early optimization visionary that has been providing boiler optimization solutions to the electric power industry for more than 20 years. The combined entity is the industry’s only dedicated optimization software solutions company with the most experienced team of optimization experts, the largest worldwide customer base, and the most advanced optimization technology solutions and platform. We own 100% of our intellectual property and hold more than 170 patents in power optimization.

NeuCo is not only committed to the success of our customers today; we are also committed to developing tomorrow’s optimization solutions. NeuCo, in partnership with the US Department of Energy, has invested approximately $35 million in two development & demonstration projects through the Clean Coal Power Initiative (CCPI) program. The result is the most advanced and comprehensive suite of integrated optimization solutions that address the power industry’s most critical asset optimization needs.
About Mainsaver:

Mainsaver offers robust Computerized Maintenance Management System (CMMS) software and practical business consulting delivering business-critical information. Mainsaver provides end-to-end CMMS within an integrated Enterprise Asset Management (EAM) framework. As one of the industry's foremost established CMMS supplier, Mainsaver is able to provide complete Asset Management solutions, superior products, customer support, with high ROI and competitive pricing to numerous industries focusing on power, utilities, government, manufacturing, education and pharmaceuticals.
