

Large Machining and Assembly Operation hits 20 Year Milestone with Mainsaver

San Diego, CA and Van Wert, OH, January 11, 2018; In a manufacturing facility covering acres, Eaton Aeroquip produces hydraulic couplings and hose assemblies for industrial applications as well as OEM manufacturers such as John Deere. The maintenance department has used the Mainsaver EAM (Enterprise Asset Management) Software package for work orders, preventive maintenance, material tracking and procurement for over 20 years. Recently the plant upgraded to Mainsaver Core 12.8 and added the Mainsaver Connect mobility module.

In a plant of this size, the Maintenance department felt that providing maintenance history, parts information and the ability to update work orders at the machine being serviced would reduce the amount of time backtracking to the Maintenance office or tool crib. Mainsaver Connect provides key maintenance functionality wherever wireless access is available into the plant on a laptop or tablet computer. Mainsaver Connect also allows either Maintenance or Production users to upload photographs from a tablet or phone which can help to document maintenance issues.

The Maintenance group carefully analyzes the data provided by Mainsaver and tracks emergency and other non-scheduled repairs on over 1000 assets. Downtime is tracked and helps the plant make decisions on asset replacement.

With 20 years of machine history in Mainsaver, the maintenance technicians frequently review history to determine the best course of action when issues arise. The plant continues to enhance their use of Mainsaver in performing true asset management.

About Eaton Aeroquip

Eaton is a power management company with 2016 sales of \$19.7 billion. We provide energy-efficient solutions that help our customers effectively manage electrical, hydraulic and mechanical power more efficiently, safely and sustainably. Eaton is dedicated to improving the quality of life and the environment through the use of power management technologies and services.
